

**Hanna Holcomb**  
**Program Coordinator**  
**Teton Science Schools**  
**Jackson, Wyoming**

**Biography:** Hanna Holcomb grew up in Eastern Connecticut and has been living in the Greater Yellowstone Ecosystem since 2019. She studied biology and English at Wesleyan University, and found a love for working outdoors while serving with the Vermont Youth Conservation Corps and working in a lab studying the effects of forest fragmentation. She has worked as a Naturalist Educator for Grand Targhee Resort and Yellowstone National Park and as a Field Instructor at Teton Science Schools. Today she is a Program Coordinator at Teton Science Schools where she loves connecting students with the fascinating Greater Yellowstone Ecosystem.

**Workshop:** *Introduction to Nature Journaling* - In this workshop, students will hone their observation skills while connecting with nature. They'll examine journal examples from conservationists in Wyoming and build their own field journal. We'll head outside to create a journal entry and see how close observation, journaling and art can spark curiosity and drive scientific inquiry.
